

Dr FuelCell[®] Science Kit

Important Information on Dismantable Fuel Cell Extension Kit

The membrane electrode assembly (MEA) is coated with 0.4 mg / cm² platinum powder.

- This differs from the specification given in operating and experiment instructions where it says that the membrane electrode assembly is 0.3 mg / cm².

The cathode (oxygen side) of the MEA is labeled with an O₂ sticker.

- During set-up always put the O₂ labeled side of the MEA towards the oxygen endplate (see set-up instructions).
